Amit Reisman | Senior Product Manager | Payments Platform Products | B2B SaaS

054-8882388 | areismana@gmail.com | Kfar Hess | LinkedIn

INTRODUCTION

I work where product meets system architecture: understanding how complex systems fit together, and turning that into clear specs and decisions with engineers. Seven years in product management across banking software and payments, including the product side of an architecture change to a payment mechanism handling millions of payments, and three years taking an SMB payment platform from discovery to 0-to-1 launch and its first two paying customers. I use AI tools daily in discovery and analysis, and I build with AI coding agents, always checking what the model produces.

EXPERIENCE

Finastra - Senior Product Owner – Infrastructure & Core Platform (Feb 2025-June 2026)

- Led the product side of an architecture change to the File Producer, a payment mechanism handling millions of payments, working with system architects and dev leads so a high-volume path could evolve safely.
- Reviewed implementation choices with architects and dev leads, keeping delivery aligned with the value each initiative set out to deliver.
- Owned the roadmap and priorities for core platform capabilities whose users were engineering teams and developers, balancing stakeholder needs, business priorities and long-term scalability.
- Led product discovery with customer-facing teams, translating recurring feedback and operational pain points into clear product opportunities and specifications.

Finastra - Senior Product Owner - Functional & Feature Teams (May 2022-Feb 2025)

- Owned a web-based SMB payment initiation platform for three years, from discovery and specification to 0-to-1 launch and its first two paying customers, together with Engineering, Design, Sales and Customer Success.
- Built APIs together with the development team, from scratch, defining what data the platform needed from the central system and covering its core functions, such as retrieving payments pending approval and rejecting a payment.
- Defined maker-checker approval workflows, who initiates and who must approve, so no payment moved without a second approval in a regulated environment.

Discount Bank — Product Manager (2019–April 2022)

- Owned an internal CRM used by relationship managers and bankers, gathering requirements directly from its users and driving rollout and adoption.

Teva Pharmaceutical — Project Manager -RM Planning Engineer (2013-2018)

- Planned raw materials across the supply chain with a daily interface with QC, QA, procurement, warehouse and production; partnered with IT on MRP requirements, supported $100M of purchasing decisions and reduced slow-moving inventory by 8%.

Personal projects (2026)

- Built with AI coding agents: a job-search agent that scores fit with an LLM and drafts documents only from a fixed facts file so it cannot invent, with a human approving every action (public on GitHub).

EDUCATION

- **Master of Business Administration**, Bar-Ilan University (2017- 2019)
- **Industrial Engineering BSc**, specialising in Information Technology, Ben-Gurion University (2009 – 2013)

TOOLS

Focus Areas	Analytical & Technical	Domain
System architecture and APIs, platform roadmap, specs and trade-offs with engineers, AI-assisted discovery	APIs and system integrations, AI tools daily, AI coding agents, agile delivery, Microsoft Dynamics 365	Payments, core platforms, banking software
